REVISION HISTORY

v4.10 – 2016-12-18

- **Enhancement:** Add compatibility with records created by units that support leap second.

v4.00 – 2015-12-19

- **Enhancement:** Removed dependency on Microsoft Access Runtime to eliminate the need for 3rd party software to be installed. This resolves compatibility issues with newer Windows operating systems and with systems having Microsoft Access 2010 or later. No database conversion is required. The appearance of the user interface changes but the functionality is unchanged except as noted in this release description.
- **Major:** Corrected issue with high CPU usage when cursor is over RecordBase View window.
- **Major:** Improved date and time format handling to enhance support for installation on computers configured for languages other than English (Canada). Note that only English (Canada) is fully tested.

CLASSIFICATION OF CHANGES MADE

The issues fixed in software / firmware upgrades are classified as defined below. While the decision to upgrade installed products is the user's, these classifications provide a guideline for the need and priority of the upgrade.

Critical: Critical changes fix issues/problems that prevent the basic operation of the device and have no workaround. Critical changes merit a product upgrade as soon as possible, if that function is being used under the conditions causing the issue

Major: Major changes fix problems that prevent the basic operation of the device but do have a workaround. Any major changes merit a product upgrade as soon as possible if the function is being used under the conditions causing the issue and a workaround is not acceptable.

Minor: Minor changes fix non vital issues that do not prevent the basic operation of the device and may or may not have a workaround. Product upgrades for such changes are not necessary unless they apply to and are needed by the user.

Feature Enhancement: Feature enhancements add a capability or extend existing capabilities of the product. Upgrades for such changes need be made only if and when that feature enhancement is desired.
